SKILLS

Languages: JavaScript, TypeScript, Python, Java, C, SQL

Databases: MySQL, PostgreSQL, Supabase, MongoDB

Libraries: Shadcn UI, Framer Motion, Recharts, Leaflet, Three.js

Web: React, Next.js, Node.js, Express.js, HTML, CSS, Tailwind

Tools: Git, GitHub, Linux, VS Code, Vercel, Netlify, Postman

Concepts: REST APIs, DBMS, Operating Systems, DSA, OOP

PROJECTS

- MockPrep ↗ | AI-powered mock interview platform *Next.js 14, TypeScript | Supabase | xAI Grok API*
- Built and deployed a full-stack interview prep platform end to end, solo, with dynamic AI question generation, structured feedback, and a question bank of 200+ real company questions across roles.
- Developed an ATS resume analyser that parses uploaded resumes and returns a keyword-coverage score with targeted improvement suggestions.
- Designed a performance analytics dashboard with a GitHub-style practice heatmap and session history using Recharts; added guest access via anonymous Supabase auth to remove signup friction.
- Implemented the UI with Tailwind, Shadcn UI, and Framer Motion, including an animated Three.js background.
- RideEasy ↗ | Zero-commission ride-hailing web application *React 18, TypeScript, Vite | Supabase | OSRM, Leaflet*
- Co-built a ride-hailing platform with a 3-person team, modelled on a zero-commission alternative to aggregator pricing after researching inDrive, Rapido, and Namma Yatri unit economics.
- Implemented role-based access control for riders and drivers, OTP-based ride verification, and real-time trip tracking over WebSockets.
- Integrated OSRM and Leaflet for route computation and live map rendering, and Razorpay for payments.
- NutriScan | AI nutrition label scanner and product health rating *Next.js, TypeScript | Gemini Vision API | Supabase*
- Designed a pipeline where an uploaded label image is parsed by a vision model into structured JSON, scored by a deterministic rule-based function, and explained back to the user in plain language.
- Kept scoring out of the LLM so results stay consistent and auditable across repeat scans; integrated the Open Food Facts API for barcode-based nutritional lookup.
- Portfolio ↗ | Personal developer portfolio site *Next.js, TypeScript | Tailwind CSS | Framer Motion*
- Designed and built a single-page portfolio from scratch with a custom neubrutalist UI, scroll-linked section animations, and project case studies; deployed on Vercel.
- Set up SEO and social metadata with dynamically generated OpenGraph images, and kept the page accessible with semantic sections, skip-to-content, and ARIA labelling.

EDUCATION

Thadomal Shahani Engineering College (TSEC), University of Mumbai

Bachelor of Engineering in Computer Engineering CGPA: 8.0

Mumbai, India

2024 – 2028 (Expected)

EXTRA-CURRICULAR & ACADEMIC WORK

- Smart India Hackathon 2026: part of teams building VeriBid AI (PS 26100, MoPNG/CPCL), an AI tender-bid verification system, BlockPilot (PS 26027, Ministry of Railways), an automated railway block planning tool, and PRGI TitleGuard, a title verification system for the Press Registrar General of India. Owned sprint planning, task division, and synthetic dataset design for VeriBid AI.
- Tapri: co-founded a multi-tenant canteen ordering PWA aimed at Mumbai colleges still running on handwritten chit systems; defined the V1–V3 product roadmap and ran pilot outreach.
- Coursework projects across DBMS (MySQL streaming database with views, triggers, stored procedures, transactions), Operating Systems (scheduling, paging, Banker’s Algorithm), and Theory of Computation.
